

MILLS FOR THUNDER

Four New Plants Ordered for the Region.

THE WINTER'S DEVELOPMENT

Gold Ores in Extraordinary Abundance.

One Hundred and Forty Stamps Now Piled Up at Terminus and Boise—Provisions for Spring.

Wherever systematic work has been done upon Thunder Mountain results have been favorable, and while the average rock is low grade, so simple are the methods required to extract the precious metal, said H. B. Fulton, who came direct from camp yesterday, with the East as his destination, that the margins will compare favorably with those of other camps that afford a higher average. Indeed, nothing has occurred to demonstrate other than that the ores of Thunder Mountain are free milling to a depth of 700 feet, said the traveler, nor is there anything on that horizon to indicate a change. Mr. Fulton was among the first to plant his stakes on Thunder Mountain, and is now the camp representative of five different companies that are operating there. With what results the campaign at Thunder Mountain has been prosecuted the machinery now piled up at the present terminus of the wagon road and awaiting its completion into camp affords, perhaps, the most substantial evidence. In this there are no fewer than 120 stamps, says Mr. Fulton, while at Boise awaiting the reopening of the trail is the material for a mill with a battery of twenty stamps, with which the South Dewey group is to be equipped the present season. The stamps at Terminus are for Dewey and Belle of Thunder Mountain equipment. On the Sunnyside group, owned by the Belle of Thunder Mountains company, 2000 feet of development has been prosecuted, with some of the ores as rich as the miner ever rested eyes on, said Mr. Fulton, while at a depth of 700 feet the management of the Dewey is developing 110 rock, with the streak of rich ore as persistent at that depth as on any other level. The mill on the property is now reducing fifty-five tons of this class of ore every twenty-four hours, the saving so close that the tables which were formerly installed have been discarded.

Indeed the developments throughout the zone have been with results that are quite extraordinary, for, of over a hundred holes that have been sunk into it, not a single one has ever been abandoned.

The most powerful evidence of results achieved at Thunder Mountain is that Mr. Fulton, who was the pioneer manager of the Dewey, is taking with him East orders for four new and independent mills, these in addition to those being installed on the Fulton and Twentieth Century groups, the former to be equipped with twenty stamps, the latter to begin with forty. Included in these orders for new mills is the Pittsburg, which will be provided with twenty stamps, the Empress with ten stamps and the properties of the Idaho Mining company with ten.

With all these batteries in operation, Thunder Mountain cannot but vindicate those who have adhered to it, notwithstanding the defamatory reports of those who prospected it from some eminence a hundred miles distant, while Mr. Fulton has no doubt of the ultimate productiveness and prominence upon the map of Western gold diggings.

At the terminus of the road Mr. Fulton has 75,000 pounds of provisions, that will reach the camp in time to conserve the needs of spring, and while six feet of snow is now upon the region, this will vanish at the usual time.

The Fulton group, which has responded so freely with its gold-bearing ores, is one in which prominent Salt Lake talent was busy by H. Mead to invest two years ago, while everything within it at this time is favorable to big results. A sawmill taken in by Mr. Fulton last season is turning out lumber for the new plants, and with this upon the ground construction at each of them should progress to early completion.

Mr. Fulton leaves for the East this morning, with rush orders for the big inventory of stamps and other machinery.

TALMAGE ON OPALS.

Interesting Analysis of Samples From Lemhi Co's Deposits.

Dr. James E. Talmage of the department of geology of the University of Utah has just completed an analysis of samples of opals and opaline minerals from the deposits of the Lemhi Opal company, located at a point 100 miles distant from Mackay, the present terminus of the Blackfoot branch of the Oregon Short Line railway, and says the results afford a most favorable comparison with opals of the best commercial quality. The opals submitted, says Dr. Talmage, in his conclusions, comprise a wide range as to variety and quality. Of their kind, they are all relatively pure—homogeneous and compact as to structure. The stones valuable as the "precious" and "fire" opals. Of these, the specimens submitted are rich in color, intense in fire, and in color and iridescence compare favorably with the best Hungarian opals, although in quality they were inferior in size and quantity to a number of opals previously submitted, but which were withheld for treatment by the lapidist. Some of the stones yet in the matrix present undoubted evidence of having been lying through exposure for long periods of time; yet among these are some of the best of the "precious" and "fire" opals. This affords conclusive evidence of course of the capacity of the stones to preserve their color and fire. In his judgment, the samples submitted are of high quality as gem stones, and in commercial quantity ought to command a market at considerable profit. "With such promising material, the company would be," concludes Dr. Talmage, "justified in prosecuting a detailed field examination."

The samples reveal many delicate colors, rich and pleasing, with reds and

greens as well as the Harlequin subvariety. The fire-opal shows a hyacinth red to honey yellow with fiery reflections, while, in addition to this, are the milk-opal, the resin-opal, hyaline and glass-opal.

The intention of the company, which in its organization includes Thomas Marlowe, W. L. Cook, A. H. Birrell, Gov. Wells, S. R. Thurman, Samuel A. King and J. A. Brown, is to proceed with systematic work as soon as the season opens, while a fine collection will add to the wintertime of the mineral exhibit at St. Louis.

THE DAY ON 'CHANGE.

Con. Mercur Again Badly Damaged, as Was Daly-Judge.

The day on the mining exchange closed with but \$4929.25 in the cash register, this the proceeds of 34,700 shares with which the investor took his departure. Con. Mercur, staggering under the weight of adverse reports from the street, receded to 56 cents spot, with the shorts agreeing to deliver it thirty days hence at a cent less; while Daly-Judge fell with a crash to 33.50, the daily fastening out to \$2.12 1/2, notwithstanding favorable reports from its Maize ground. Active buying of New York for Park City as well as local interests moved it from 18 1/2 to 21 cents, while May Day, on the other hand, was hammered down to 6 1/2, with 7 cents paid for it at the close. Lower Mammoth was reduced to 35 1/2, with Petro changing hands at 5 cents and Utah of Fish Springs at 4 1/2. Sacramento was again eagerly sought around 29 cents, while Yankee Con. recorded transfers at 42 1/2 and Tetra at 30. In the sparring Daly West was marked up to 33.50, while Ajax found a market at 7 cents, with Martha Washington wrapping up 12,000 around old prices, the day closing on the following market:

A. M. Call.	P. M. Call.	Bid.	Asked.	Bid.	Asked.

Boston Copper Market.

(TRIBUNE SPECIAL.)  
Boston, Mass., Feb. 4.—Dullness was the most characteristic feature of the local market today. Stocks were not quite so plentiful and appeared to be a firmer undertone than yesterday, although there was very little trading outside of Amalgamated. There is a renewed feeling that we are to have better copper market, but no one seems inclined to give them a start just at present. Hornblower & Weeks, brokers, 55 State street, Boston, and 10 Wall street, New York, furnish the following quotations:

Amalgamated	Sales	High	Low	Clos.
Bingham	100	48 1/2	48 1/4	48 1/4
Daly West	100	25 1/2	25 1/4	25 1/4
United States	100	20 1/2	20 1/4	20 1/4
Utah	100	12 1/2	12 1/4	12 1/4
Mercur	100	56 1/2	56 1/4	56 1/4
Curb-Boston	5,500.00			

AT CON. MERCUR.

Slimes Plant to Get Down to Continuous Performances Next Week.  
George Derr, manager of the Con. Mercur Mining company's mines and mill at Mercur, leaves for camp again this morning, with assurances that the new slimes plant installed by George Moore will go into active and continuous operation on Wednesday next. Mr. Moore, whose arrival from Deadwood, S. D., is scheduled for today, is to be present at the event. At present the management is putting 500 tons of ore daily through the mill, while the

UNHAPPINESS DISPELLED.

Men and Women Unanimous About It.  
Many women weep and wail and refuse to be comforted because their once magnificent tresses have become thin and faded. Many men incline to profanity because the flow bite through the thick tangle on their cranial. It will be good news to the miserable of both sexes, to learn that Newbro's Hairdressing Cream has been placed upon the market. This is the new hairdressing cream and antiseptic that sets the underlying cause of all hair diseases. Heretofore a new preparation entirely new principle. Anyone who has used it will testify as to its worth. Try leading druggists. See it in the sample to T. H. Karpelz Co., Detroit.

TO WORK TEXAS.

Park City Talent Will Develop Prospects Out of Bountiful.

(TRIBUNE SPECIAL.)  
Park City, Feb. 4.—The Texas Mining company, formed largely of local talent, among whose officers are State Representative E. P. Evans, president; W. D. Evans, vice-president and manager; J. T. Evans and A. R. Burg, is about to resume development work on its group of eight claims six miles east of Bountiful. This was decided upon recently, and it is expected that two shifts will be put to work within a short time. The officers of the company have on exhibition samples of ore taken from various parts of their prospect, which certainly denote a remarkable amount of wealth very near the surface. They consist of specimens of galena and copper-bearing quartz, and run well in four metals. The seam from which they were taken varies from four to twelve inches in thickness, and has been exposed by a twenty-eight-foot tunnel, a shaft at the end of this bore of forty feet depth, and a tunnel along the strike of the vein 150 feet. In the whole length of this tunnel, which gains depth rapidly, the ore seam is continuous, widening in several places into very promising channels. In the shaft the ore shows up in exceptionally promising quantities, eight tons have already been taken out and piled upon the dump. The average lead assay for the seam and at various points, according to W. D. Evans, is 27 per cent, and the strike of the vein 150 feet. In the whole length of this tunnel, which gains depth rapidly, the ore seam is continuous, widening in several places into very promising channels. In the shaft the ore shows up in exceptionally promising quantities, eight tons have already been taken out and piled upon the dump. The average lead assay for the seam and at various points, according to W. D. Evans, is 27 per cent, and the strike of the vein 150 feet. In the whole length of this tunnel, which gains depth rapidly, the ore seam is continuous, widening in several places into very promising channels. In the shaft the ore shows up in exceptionally promising quantities, eight tons have already been taken out and piled upon the dump. The average lead assay for the seam and at various points, according to W. D. Evans, is 27 per cent, and the strike of the vein 150 feet.

It is the intention of the company to put its men at work in the 150-foot tunnel and continue along the strike of the vein, by which policy a great depth can be conveniently and readily attained. The hill will give 100 feet of depth, or enough to insure a mine if it is there. In addition, shafts will be sunk.

WEALTH OF ASPEN.

Colorado Camp That Continues Large Output of White Metal.

Samuel Clark, for many years identified with commercial and mining pursuits at Aspen, Colo., came in from that abode of bonanza kings yesterday, accompanied by Mrs. Clark, the visitors, after a few days with their children, who are in attendance upon Rowland Hall, to continue to California, where they will remain for several weeks. Of Aspen Mr. Clark says that while the average contents of its output have diminished, the tonnage continues quite heavy, with employment afforded a large number. While the Mollie Gibson and Smuggler have closed the sensational chapters in their careers, the Percy mines, opened up by George Newman, constitute the greatest silver proposition at this era in Colorado, with some in the patriarchal list coming forward at intervals with a closet of ore that would have astonished the world in former days. Mr. Clark, who has a number of investments in this city and upon its margins, is more favorably impressed with each visit, and it is not unlikely that he will at least establish a branch house before the season has closed.

DALTON'S LEAD ORES

Rich in Silver and Well Up in Gold.

NEW IN VIRGIN GROUND

Copper Bearing Channel in the Brooklyn.

Followed for a Hundred Feet in Lower Workings—Seven Per Cent Copper in Sampson.

From the Dalton & Lark group at Bingham is coming a quality of lead ore at this time that is reminiscent of palmist days in the career of that system of Bingham producers about which the Bingham Con's embrace was thrown a few years ago, some of it revealing over 100 ounces silver and 40 per cent lead, with 40 gold per ton, while another class from the same channel shows as much as 50 per cent lead, with less silver and gold. Indeed, the latter metal is quite capricious, and with a \$1 average for the ores now exposed Superintendent R. W. Rodgers, who was a visitor at the general offices yesterday, will be contented. The channel in which these ores occur and which has become a source of no insignificant revenue, notwithstanding the partiality of the Bingham miner to copper, was opened up at a depth of 1075 feet in the Dalton ledge and has now been followed on its strike for fifty feet, with the ore as strong on top and in the bottom of the level as it is in the face. In the Brooklyn ledge, where the ferro-sulphides carrying characteristic values in gold and silver, the channel had now been followed for seventy-five feet to the west and twenty-five feet east, with the level in virgin ground and entirely in ore. The extent of this channel had not been determined when Superintendent Rodgers was summoned to town, but it was eighteen feet between walls on the level above and there is nothing to indicate less strength below. Conditions in the Sampson ledge are equally gratifying, the ores from that source maintaining an average of 7 per cent copper, with some gold and silver, while the output of the Dalton & Lark system is now averaging 125 tons daily, with 200 tons coming daily from the company's Commercial group. Superintendent Rodgers, under whose intelligent direction so many changes have been wrought, is quite enthusiastic over conditions throughout at the Bingham groups and promises a new record of production as soon as transportation over the Copper Belt railway shall permit. He leaves for camp again this morning.

MAJESTIC SHUT-DOWN.

Mine Forces Retired While Waiting on Important Negotiations.

Pending the fate of negotiations in the East that must materially affect the future of the Majestic company's operations in this State, the forces that have been engaged upon the development of its territory in Beaver county have been retired and operations momentarily suspended by Mr. Mays, acting manager at camp. These advances, not unexpected, which came yesterday morning from camp, at that time with which to discharge the payroll are hourly expected from the East, while the negotiations at this time are characterized as most favorable to ends the company has been seeking for several weeks. Mr. Mays, who has a few persons will enable him to keep the camp-fires going and conditions alive, but that he will undertake no more for the present. It is understood that the trustees are making progress in the reorganization upon which they started and that definite advice will be forwarded in a few days.

IN OLD TELEGRAPH.

Copper Ores as Rich as Any Ever Found in the Old Camp.

A sample of ore with which Superintendent Allen yesterday returned from the latest disclosure in the Old Telegraph group, belonging to the United States Mining company's Bingham system, tell of the presence of copper in percentages that compare favorably with those of any camp of copper in the land. The sample in question affords a typical instance of bonanza, chalcopyrite and other varieties of high-grade copper sulphides as they occur at Bingham, while an analysis reveals the presence of over 20 gold, with argentiferous contents in excess of the average. The new ore body, which has been opened up for seventy feet on the strike, is one of the largest that has been opened up in that territory, and while the mass will average nothing like percentages contained in picked samples, it is said by those in position to know that the contents show a very pronounced increase.

DOG FOUND IT.

A Tale From San Francisco That Will Interest the Prospector.

Thinking their dog was chasing a mountain lion or some other wild beast, H. Roth and A. E. Montmorency, two miners from Nye county, Nevada, seized their guns and followed until the dog came to a stop on the top of a great boulder. The animal was making no attempt to discover the lost trail, but was standing rigid on the rock, his nose in the air. As soon as his masters arrived he wagged his tail, barked once or twice and disappeared in the underbrush, says a San Francisco dispatch to the New York Press.

Surprised by the strange behavior of the animal, the men began an investigation, and soon discovered that the rock was of ore containing gold and silver. Measurements of the boulder were taken and it was learned that the ledge was forty-two feet wide and extended in a visible line for over 2500 feet. An assay of the ore was made and it was found to run from \$8 to \$125 per ton. The ledge is in Nye county, seventy-five miles from Tonopah and twenty-

five miles east of Downville, the famous old mining camp, which employed hundreds of men in the days of the pioneers. It is a well-traveled part of the country, and many old miners have prospected in that region, but it remained for a dog to discover the hidden gold.

SETTLED WITH DONOVON.

Money Coming in Satisfaction of Claims on Grubstake.

A telegram from John C. Gray, representing De Witt B. Lowe of this city in his scrap with John J. Donovan, a former captain of Salt Lake police, over grubstake interests in the Klondike, informs his client that a settlement was consummated yesterday, and that the proceeds are now on the way to Zion. What the sum to be received by Mr. Lowe is, that gentleman would not divulge yesterday, although it is said that it exceeds the proceeds of a dull day in the pit. It is understood that Capt. Donovan will return to his camp in Alaska to continue the development of valuable acquisitions there, and that he will probably visit his old home again next autumn.

UNDERGROUND AT ROCCO.

Tunnel Now Putting Down to a Depth of 1000 Feet.

A photograph of the underground workings of the Rocco-Homestake company's mines at Eureka, Nev., and from which dividends began to arrive in town again last month, reveals a good many thousand feet of development, while certifying to the presence of nearly 5000 tons of high-grade lead ore containing some silver. To get into lower levels the management, which is under the direction of Bert Smith, writes that the new shaft, equipped with a double-cylinder engine, has now reached the 150-foot level, with a thousand feet its destination, connection with the main workings to be made along that horizon. For the putting down of this shaft, said Prof. Tibbels, to whom the photograph of the workings came yesterday, a fund was created during the suspension of dividends, and that bread-money will now be passed around each recurring month appears quite well assured.

CARISA'S FINE ORE.

Three Lots of Splendid Quality Add to Treasury's Contents.

The management of the Carisa of Tintic yesterday drew down the proceeds of three more lots of ore of a class of which dividends are made, and is following them up with other consignments that afford most cheerful evidence of improved conditions at the property. Of the lots marketed yesterday, two of them were on controls showing 30 per cent of the red metal, while the third held up to 17 per cent, with small values in silver and gold. With copper around 17 cents, as it was when the company acquired the property, the earnings from ore such as those marketed yesterday would be materially increased—and there are hopes.

Ore and Bullion.

In the ore and bullion market, the day's settlements amounted to \$59,500, McCornick & Co. reporting them as follows: American bullion, \$38,900; gold, silver, lead and copper ores, \$31,600.
